Visual Evidence

One observed moment

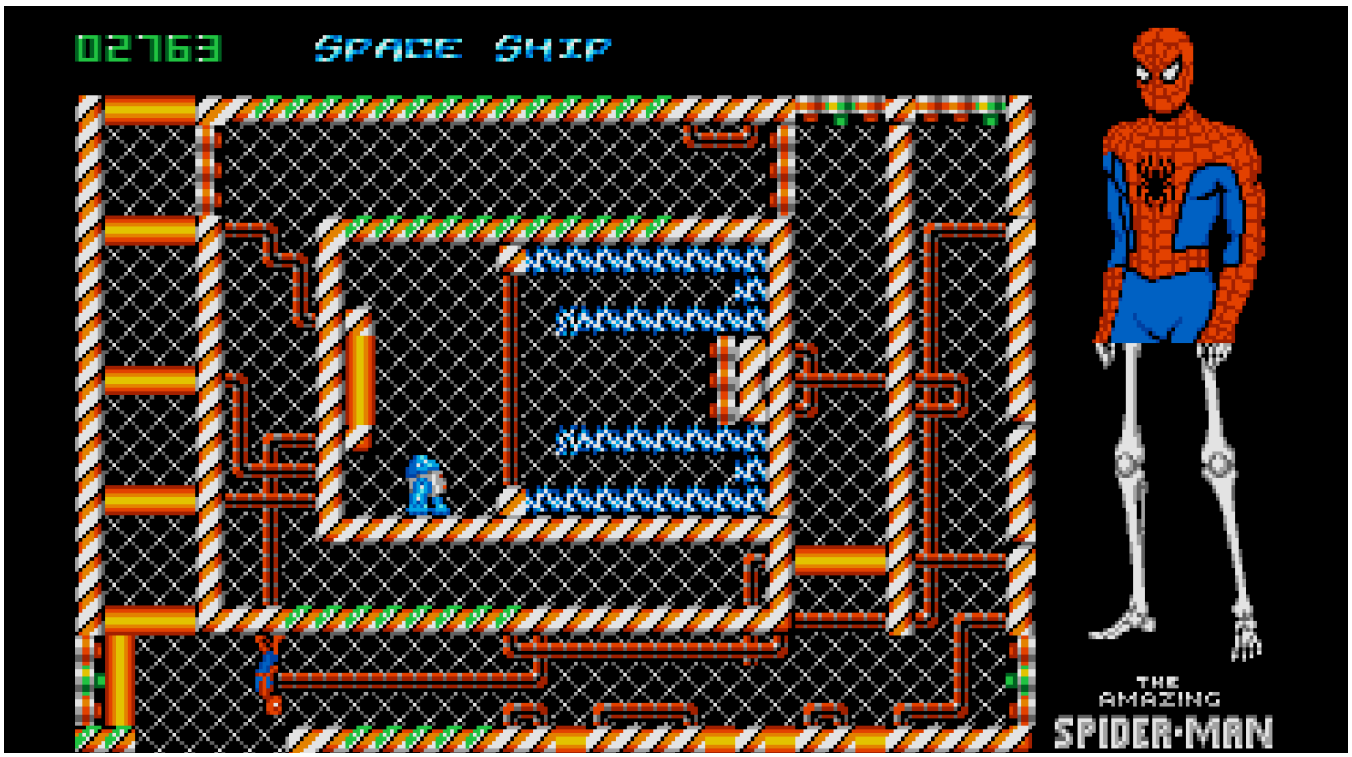

Image evidence prompt

Submit one original screenshot or still of your Case Study 1 Atari game. Caption it with the title, version or platform when known, the scene shown, and its source. A relevant image from your first case study may be reused.

Requirements and potential deductions

- The image shows the original scene used for this redesign. (up to -0.5 points)
- The caption identifies the selected Atari game, scene, and image source. (up to -0.5 points)

Caption: The Amazing Spider-Man (1990), Space Ship Room, I took a screenshot

Visual Redesign

Improvement goal

Response prompt

Identify one visual problem in the original scene and explain the mood or player experience your redesign should support. Refer to a specific detail in the original image.

Requirements and potential deductions

- Identifies a visual problem using a specific detail from the original scene. (up to -0.75 points)
- Explains the intended mood or player experience of the redesign. (up to -0.75 points)

Submitted response

One visual problem with this scene is the orange pipes (not the orange candy cane looking walls). It's just a part of the backgro
and has no impact on game, but it looks like solid wall or some kind of special object so it's just confusing and cluttering the scr
My redesign would make the the room less confusing to look at and traverse, and actually look like a spaceship. I don't remem
ever seeing a fictional spaceship full of bright orange with a weird diamond fence pattern for the background.

Revised palette

Response prompt

List your proposed colors and their roles, including any neutrals. Explain why this palette size and a named color relationship suit your improvement goal, and how contrast makes an important element stand out. Color names or swatches are sufficient; exact color codes are optional.

Requirements and potential deductions

- Identifies the proposed colors and what each is used for. (up to -0.5 points)
- Justifies the palette size and a named color relationship using the improvement goal. (up to -0.75 points)
- Explains a contrast choice that makes an important element stand out. (up to -0.75 points)

Submitted response

Replace the orange and white candy cane looking walls with a solid neutral grey border by a darker grey. This would make the
the red/green switches stand out more so you know they're there. I would also change orange lasers closer to an analogous re
not only indicate they'll hurt you, but they're also solid and have collision with the red being a reference to the red walls barriers
Star Wars: The Phantom Menace. Lastly, make the background pipes a sort of golden yellow to have a triadic/primary color
relationship with the red walls, and blue lightning.

Redesigned scene

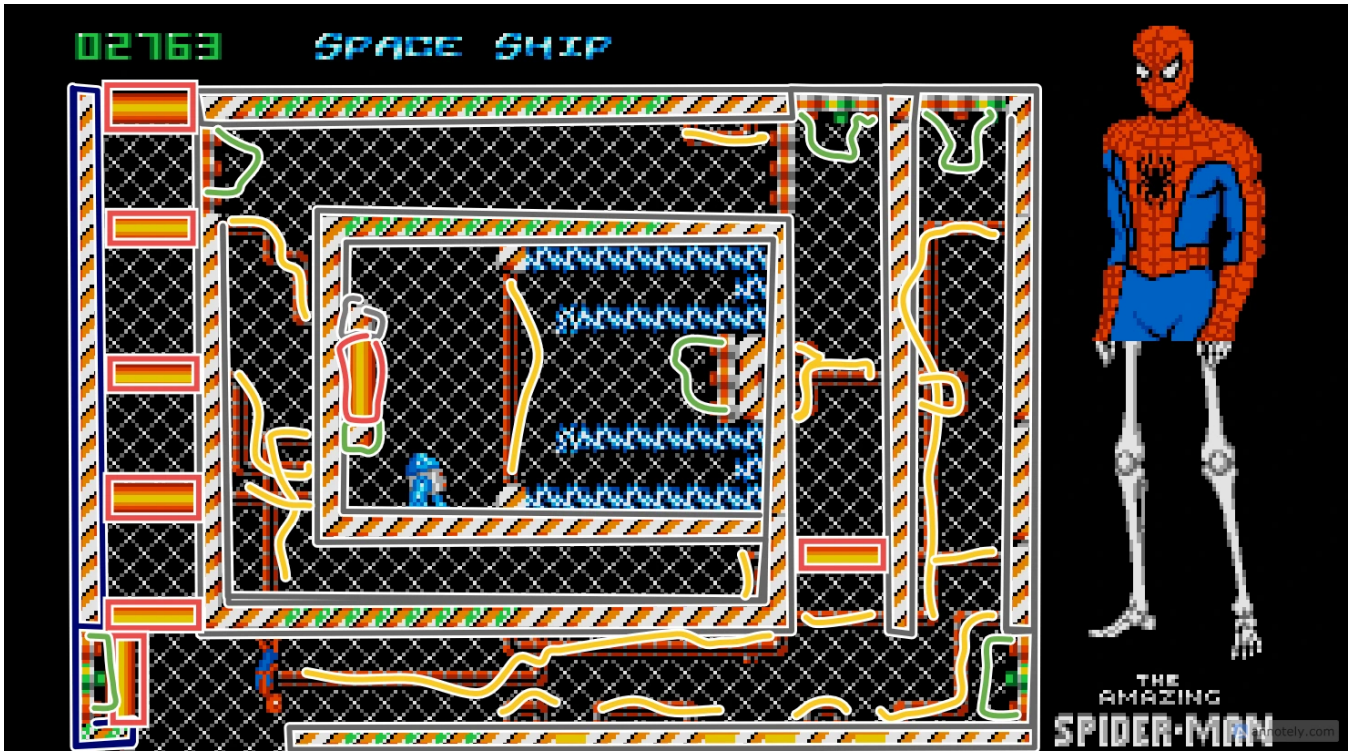

Image evidence prompt

Submit a colored sketch, annotated recoloring, or mockup of the same scene using your proposed palette. Include a gameplay element and an interface or state indicator. Keep an important state understandable without color alone, using a label, shape, or icon. Caption the image to identify the scene and your changes.

Requirements and potential deductions

- The redesign applies the proposed palette to the same scene's gameplay element and interface or state indicator. (up to -1.25 points)
- An important state has an understandable label, shape, or icon in addition to its color. (up to -1.25 points)

Caption: The green rectangle indicates an unpressed button, this will be pushed in when activated/

Look and feel decision

Response prompt

Explain one visual change beyond the palette, such as composition, interface layout, character shape, or an animation you would add. Connect it to a relevant Chapter 6 concept from vision, interface, ambience, or storytelling and explain its intended effect on the player. Describe motion in words if your sketch cannot show it.

Requirements and potential deductions

- Connects a specific visual change beyond the palette to a relevant Chapter 6 concept. (up to -0.75 points)
- Explains how that change would affect the player's experience. (up to -0.75 points)

Submitted response

I would remove the diamond pattern background replace it with a background resembling outer space with stars. This would no tie into the Space Ship theme, but it would also make the screen way easier to look at.

Evaluate the redesign

Response prompt

Compare your redesign with the original scene. Explain how the revised visuals work together to address your improvement goal while keeping the game's core actions and rules. Refer to a specific difference visible in the two images.

Requirements and potential deductions

- Evaluates the combined effect of the revised visuals on the improvement goal using a specific before-and-after difference. (up to -0.75 points)
- Explains how the original core actions and rules remain intact. (up to -0.75 points)

Submitted response

The revised scene simply adds more visual clarity so locating at this room doesn't hurt your eyes. The puzzle with the switches intact, as well as the intended space theming, it's just easier to look at.
